Introduction

The Guest-room Management System is a R-DBMS project that will help to ease the check-in, check out, and booking process of a certain Guest-room . This system allows the hotel management to store all the rooms of their Guest-room along with the room category and prices per day. The rooms that being stored will be used for managing the availability of the rooms.

It contains the admin section and the user (customer) section. All the editing's, updating, managing rooms, bookings, and payment are for the admin section. The design of this system is made as simple as possible so that the user won't get any difficulties while working on it.
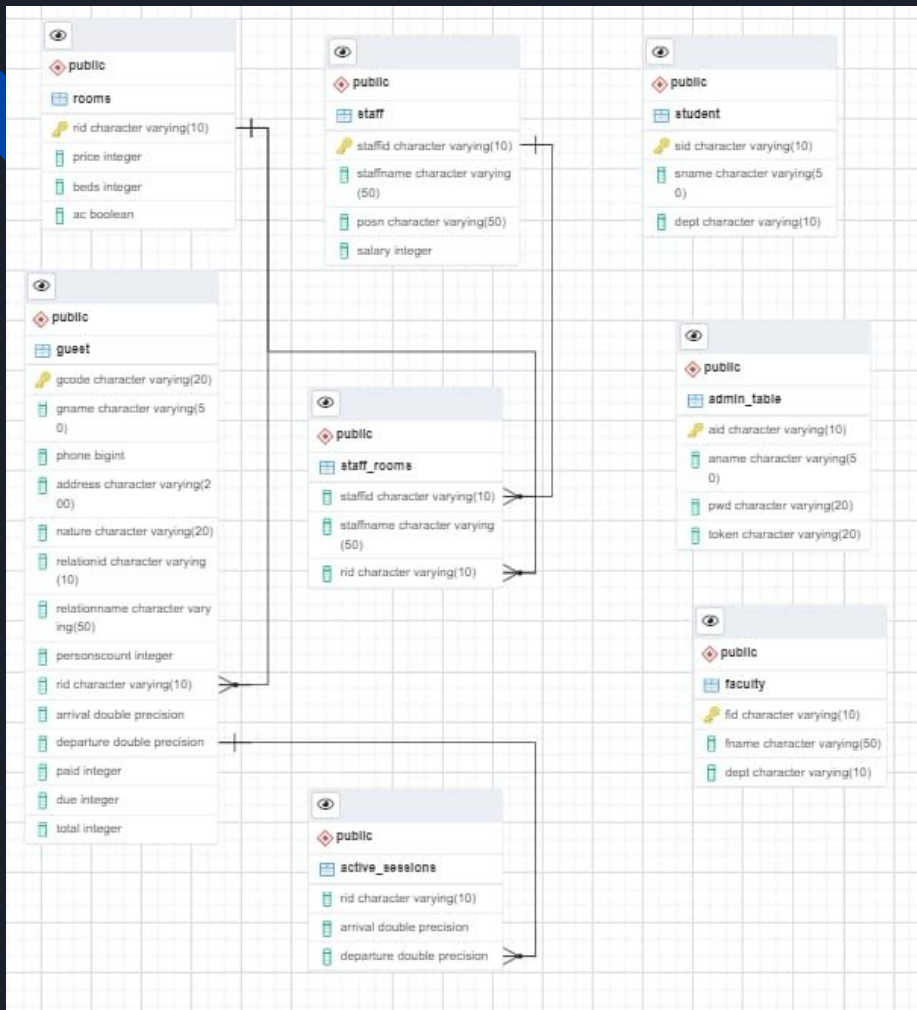

Back End tools

- PHP(**Hypertext Preprocessor**)

- MySql

Front End tools

- HTML

- CSS
